

↪ App: Appliance Comparison Program

A basic application to compare various home appliances, their energy usage and cost.

Created as a team project to develop our skills in UX and software development.

This program was created through the use of an [in-memory H2Database](#) to facilitate our dataset as well as [JavaFX](#) to create our user-interface.

Created by Team ↪Dev:

Features and Functionality

Search Page

The Search Page provides basic functionality to search through multiple appliance data sources.

Namely, [the U.S. Department of Energy's Database](#) and [Energy Star's Certified Product Data Sets](#).

Additionally, the user is given the option to apply filters to the DB query for: the Appliance Type, Energy Usage, and Model.

Filter by Energy Usage

Comparison Page

The comparison page displays the appliances selected through the search page. Furthermore, the user is given the option to input the dollar amount that they pay for each kilowatt hour (kWh).

A **use-case** for this specific page would be to estimate the cost of a collection of products that user owns. Another use case would be to compare two different appliances that the user may consider purchasing.

User Profile Page

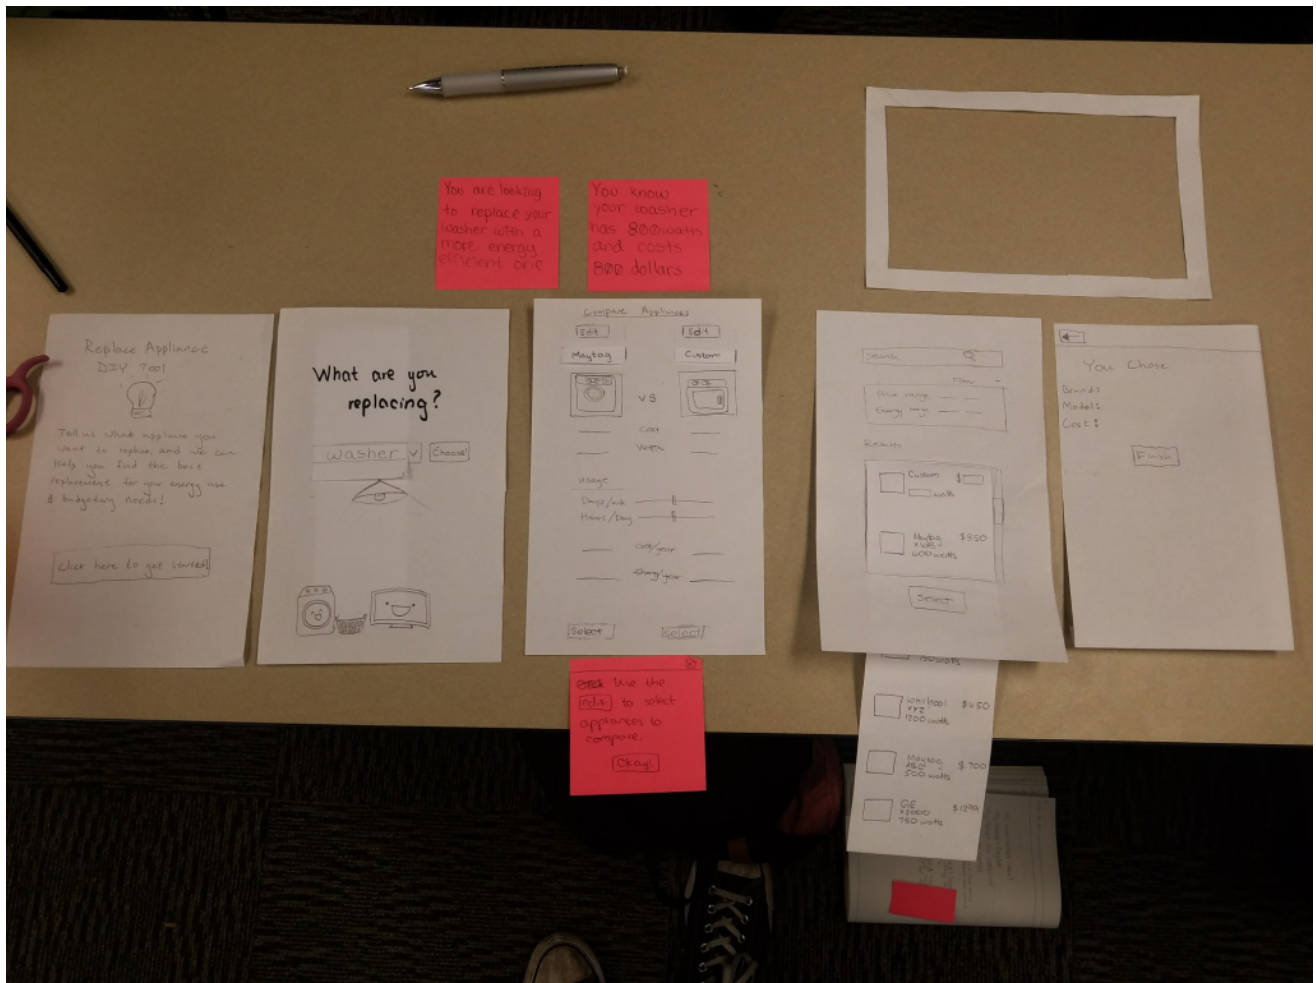

The user page is currently incomplete, although has a functioning favorites page. Which allows users to create a separate list of appliances from the comparison page.

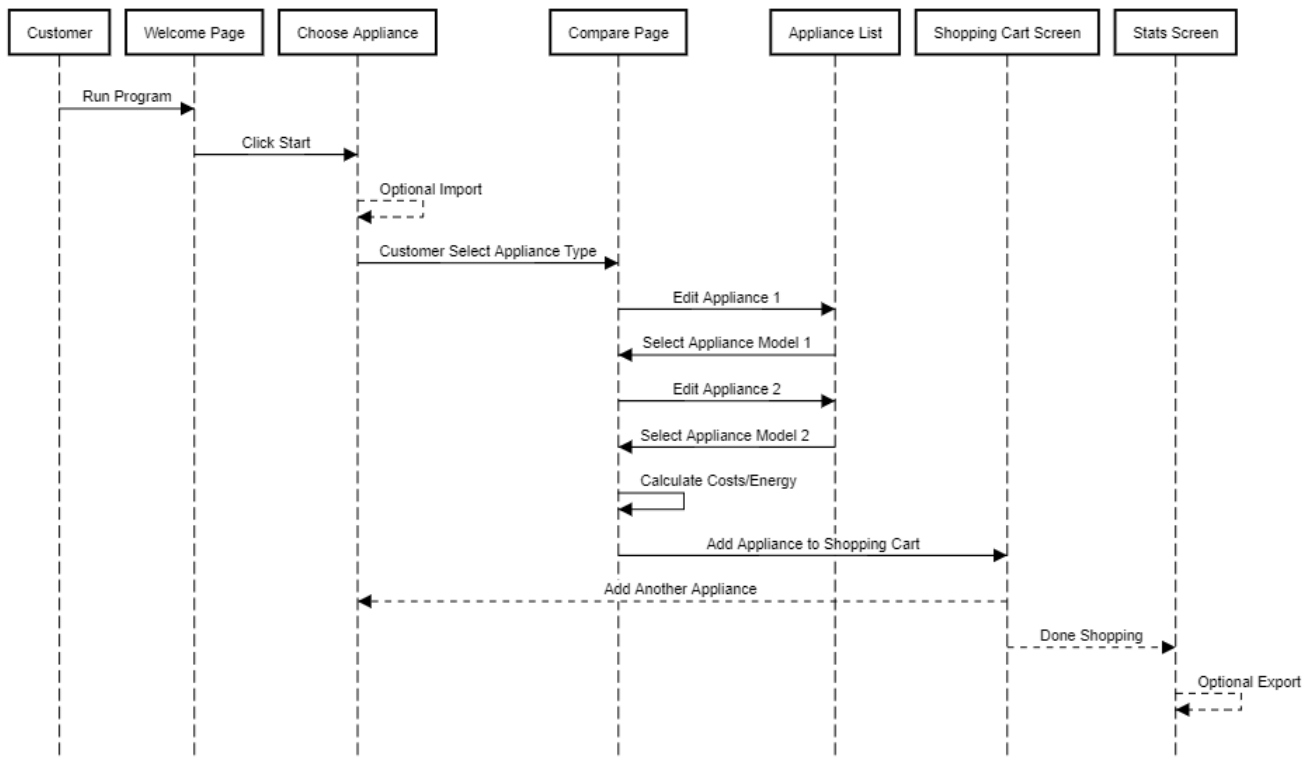

Development Procedure

This was a **Team project** where we had created and designed an application to compare a variety of different appliances and the data that relates to them; such as price, energy cost, name and manufacturer.

We had **analyzing requirements** as well as created prototypes and mockups through involved UX which had then gone through review through our peers.

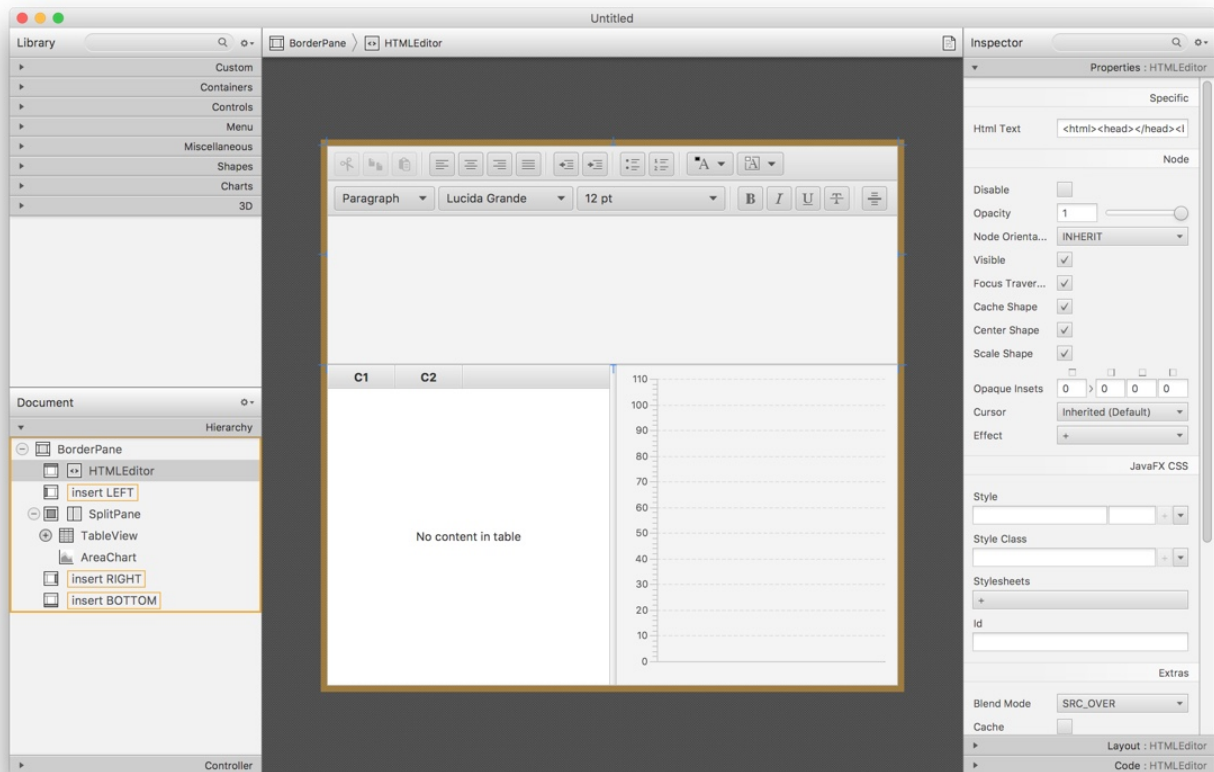

Appliance Comparison Application - Not Dev

Front-End: JavaFX

The usage of FXML allowed for our team to quickly develop a non-intimidating, modern looking user-interface. Correspondingly, when working with FXML debugging was relatively painless considering that the syntax is relatable to XML or HTML.

The **source code for our user-interface** may be accessed through the directory: `\src\fxml\`

Example FXML Code:

```

17 <BorderPane maxHeight="-Infinity" maxWidth="-Infinity" minHeight="-Infinity" minWidth="-Infinity" prefHei
18 <top>
19 <ToolBar prefHeight="12.0" prefWidth="600.0" BorderPane.alignment="CENTER">
20 <items>
21 <Button mnemonicParsing="false" onAction="#backButtonClicked" text="Back" />
22 <Text strokeType="OUTSIDE" strokeWidth="0.0" text="User Profile (Under Maintenance)" textAlig
23 </items>
24 </ToolBar>
25 </top>
26 <left>
27 <VBox BorderPane.alignment="CENTER">
28 <children>
29 <ToolBar>
30 <items>
31 <Label alignment="CENTER" prefHeight="32.0" prefWidth="404.0" text="Favorites" textAlig
32 <font>
33 <Font name="System Bold" size="22.0" />
34 </font>
35 </Label>
36 </items>
37 </ToolBar>
38 <TableView fx:id="favTableView" prefHeight="329.0" prefWidth="410.0">

62 </VBox.margin>

```

Back-End: [H2Database](#)

H2Database is a **Java SQL database** to which we had opt'd to configure an in-memory database. More specifically, when the program is initially executed the data is loaded from the CSV files contained within the `./database/` directory. This is accomplished, through the `./src/driver/H2Database.java` which is used to interact with the DB server. This includes, connecting to the server, sending queries, parsing the CSVs and other various SQL and DBMS commands.

DROP TABLE IF EXISTS TEST;

CREATE TABLE TEST(ID INT PRIMARY KEY, NAME VARCHAR(255));

INSERT INTO TEST VALUES(1, 'Hello');

INSERT INTO TEST VALUES(2, 'World');

SELECT * FROM TEST ORDER BY ID;

UPDATE TEST SET NAME='Hi' WHERE ID=1;

DELETE FROM TEST WHERE ID=2;

HELP

Adding Database Drivers

Additional database drivers can be registered by adding the Jar file location of the driver to the the environment variables H2DRIVERS or CLASSPATH. Example (Windows): to add the database driver library C:/Programs/hsqldb/lib/hsqldb.jar, set the environment variable H2DRIVERS to C:/Programs/hsqldb/lib/hsqldb.jar.
